A bearing has a life expectancy which depends upon load and speed imposed on the bearing. Calculations, based upon laboratory testing and field experience, have been established to determine, as accurately as possible, the life span of a group of bearings of a given size. Fatigue failure is the result of a bearing living out its normal life span.

Victorian fiction is full of characters who are hag-ridden by the desire to get inside that particular Ring which is, or was, called Society. But it must be clearly understood that "Society," in that sense of the word, is merely one of a hundred Rings and snobbery therefore only one form of the longing to be inside.

A ring laser gyroscope (RLG) consists of a ring laser having two independent counter-propagating resonant modes over the same path; the difference in the frequencies is used to detect rotation. It operates on the principle of the Sagnac effect which shifts the nulls of the internal standing wave pattern in response to angular rotation.

A bearing is a machine element that constrains relative motion to only the desired motion, and reduces friction between moving parts. The design of the bearing may, for example, provide for free linear movement of the moving part or for free rotation around a fixed axis; or, it may prevent a motion by controlling the vectors of normal forces that bear on the moving parts.
