122 Analysis of Linear Control Systems 3. An observed variable $y(t)$ which is measured by means of sensors and which is used to obtain information about the state of the plant; this observed variable is usually contaminated with observation noise $u_o(t)$; 4. A controlled variable $z(t)$ which is the variable we wish to control; 5.

2 LINEAR SYSTEMS 5 Linear, time-invariant (LTI) systems are of special interest because of the powerful tools we can apply to them. Systems described by sets of linear, ordinary or differential equations having constant coefficients are LTI. This is a large class! Very useful examples
