In a Fuzzy Logic washing machine, Fuzzy Logic detects the type and amount of laundry in the drum and allows only as much water to enter the machine as is really needed for the loaded amount. So, less water will heat up quicker - which means less energy consumption.

In particular note that $\Gamma \not\models \Delta$, that is, Δ is not a logical consequence of Γ , if and only if there is some interpretation A of L such that $A \models \Gamma$ but $A \not\models \Delta$. As a special limiting case note that $\Gamma \models \Delta$, which we will write simply as $\Gamma \models \Delta$, means that $A \models \Delta$ for every interpretation A of L .

It is crucial to note the placement of the parenthesis and how this is crucial to the meaning of the sentence. Without the parenthesis, we read from left to right. So $P \wedge Q$ is understood to mean $(P) \wedge (Q)$. Notice the difference in the truth tables: $P \vee Q$: $P \wedge Q$ T T F F T F F F T T T F F T F = "OR": In mathematics, we use an inclusive "or".
