Different methods for determining the morphometric properties of lunar domes (diameter, height, flank slope, edifice volume) from image data or orbital topographic data are discussed. Additionally, multispectral and hyperspectral image data are examined, providing insights into the composition of the dome material.

oped in [6], which relies on the morphometric dome properties, yields estimates of the lava viscosity $\hat{\nu}$, the effusion rate E , and the duration T of the effusion process for a monogenetic lava dome. Using the morphometric values listed in Table 1, we obtained rheologic properties for the examined domes (Table 2).
